Research Projects

2024.7 – 2024.8

📖 **Improved decoding of tanner codes** (in preparation)

With Prof. Zeyu Guo

1. Present improved algorithms for decoding tanner codes.
2. Investigated previous work on expander codes, tanner codes, and insertion-deletion codes.

Research Projects (continued)

- 2024.2 – present  **Learning Sparse Parity with Noise in Linear Samples** (in review)
With Prof. Xue Chen and Wenxuan Shu
1. Present improved algorithms in both low-noise & high-noise settings.
 2. Investigated previous LPN algorithms.
- 2023.9 – 2024.1  **Expansion on regular Graph**
Advisor: Prof. Xue Chen
1. Investigated two approaches for establishing lower bounds on graph expansions: the second eigenvalue method and the girth method. Gained knowledge of their theoretical foundations and limitations.
 2. Explored potential avenues for enhancing the girth method to derive stronger lower bounds on graph expansions. Analyzed existing approaches and evaluated the challenges and limitations in improving the methodology.
